**Product:** OZ eScreener Plus™ (eSP™)

This testimonial is from a provider of newborn hearing screening services to hospitals. They work with many manufacturers and hospital partners, and have experience with many different patient data management systems. They recommend OZ eScreener Plus™ (eSP™) for its easy to use reports and visibility to the continuum of care.

“ Unlike other data management systems, we have found OZ eSP provides easy-to-use reports we can run on our own. This provides us with the due diligence auditing capabilities we need to ensure our state reporting is accurate for all our babies. What we really love is the visibility to the continuum of care. It is important to us not only to screen the babies, but to know if our program makes a difference. With OZ eSP we know that the baby-in-need is receiving diagnostic services, and ultimately, that our program positively contributed to each baby’s early identification and intervention. ”

We work with multiple programs all over the United States providing newborn hearing screens. Our hearing screening data is electronically transferred into OZ eSP™. We cross check the results in our screening equipment with OZ eSP™ to ensure that all the eligible babies’ results are uploaded, and that each baby’s results are accurately reported to the state. We need to understand why there would be no results reported. Was the baby transferred to another facility or is the baby pending in the NICU? But our job does not stop there. We also want to know if our program is making a difference to these babies and their families. Are the babies that refer on the hearing screening receiving diagnostic audiological services? Are we identifying babies who have hearing loss? The continuum of care documentation in OZ eSP™ assists us in understanding our program’s positive contribution to the babies we serve.
