

Name: [Anonymous]

Product: NANI™, Telepathy™ CCHD, Telepathy™ EHDI,
OZ eScreeener Plus™ (eSP™)

This testimonial is from a ward clerk, and like many of our hospital customers the testimonial could only be provided anonymously. She has provided care to babies ensuring data is complete and accurate before it was transmitted to the Minnesota Department of Health.

When I started working in the newborn nursery our screening data was kept on spreadsheets. We started needing 3 clerks to assist with managing the data and due to OZ NANI and the OZ Telepathy tools I can manage the data. It is quicker than ever before. What used to be more involved is a lot easier and there is a lot less manual entry. The most important aspect is that we identify newborns who need further care early through our CCHD and EHDI screening. We can quickly identify who needs a referral to the Children's Hospital. And we do this in the 24 to 72 hours the newborn is an inpatient. I can't imagine anyone not having it!

She ensures every baby has CCHD and EHDI results in OZ eSP™. She integrates the hearing screening results and ensures babies who are transferred are assigned to the correct facility. "Before NANI, our nurses manually entered the patient demographics. The clerks rectified if a name did not match, was not entered or entered multiple times. NANI eliminated the need to fix the data." It is quick and easy to automatically download the hearing screening results using Telepathy™ EHDI. Telepathy™ CCHD data integration from the pulse oximeter is seamless and requires no need to download. We just make sure that every baby is screened prior to discharge. And newborns transferred out of our facility are marked as transferred in OZ eSP™. The state automatically has the results. "You are reassured by knowing the customer support staff is always there for you. They provide step-by-step instructions and always make it easy. I would describe them as patient, calming and resourceful."
